

EXECUTIVE BRIEFING

The UTrucking AI Phone Assistant

A voice assistant that answers student calls, looks up their orders, and hands off to your team — around the clock.

THE OPPORTUNITY

The front desk fields the same calls, all season long

- "Where's my pickup?" · "What's my order status?" · "How much is storage?" — the same questions, thousands of times.
- Call volume spikes at move-out and move-in — exactly when the team is busiest.
- UTrucking serves roughly half of WashU undergrads, so the repeat-call load is real.

Nearly every one of those calls can be answered automatically.

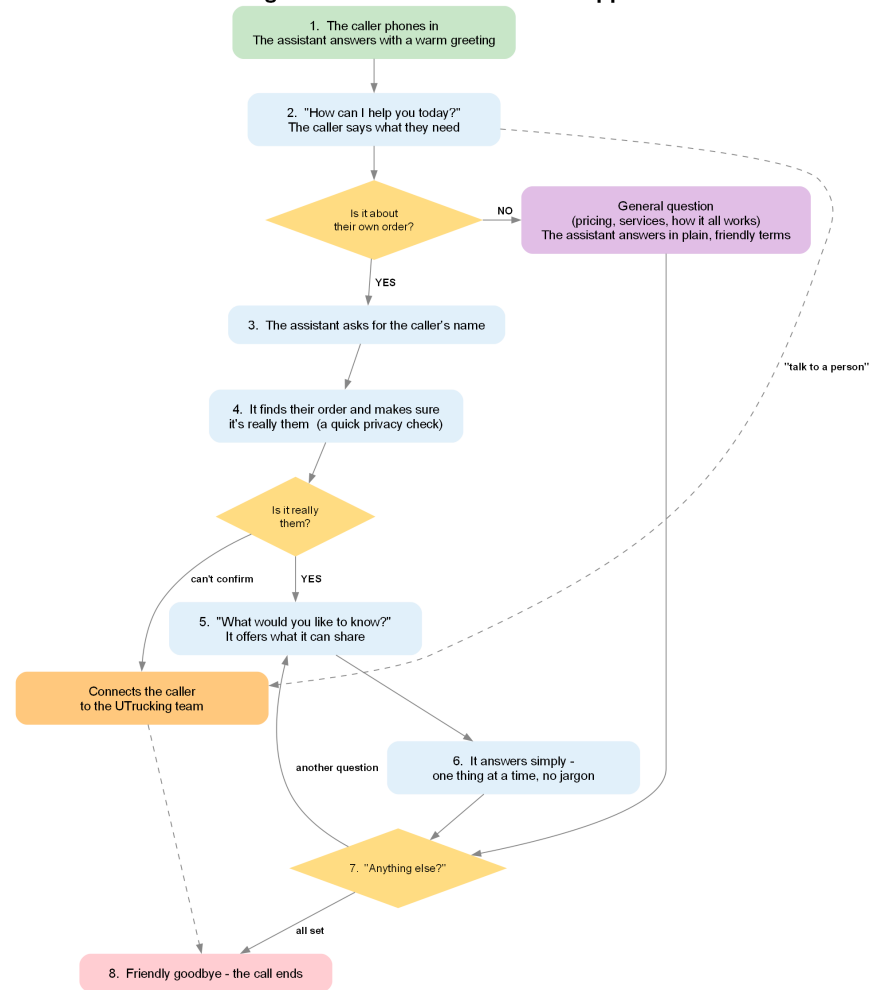

THE SOLUTION

A friendly voice that never puts anyone on hold

- Answers instantly, 24/7, in a warm and natural voice.
- Looks up any student's order by name and answers their questions.
- Knows UTrucking's services, pricing, and policies.
- Connects the caller to a real person the moment it's needed.

What happens on a call

The UTrucking Phone Assistant — What Happens on a Call

CAPABILITIES

What it can do today

Find an order

Looks up a student's order by name, even mispronounced or misspelled.

Verify it's them

Confirms identity before sharing anything — a built-in privacy check.

Answer clearly

Status, pickup location, date & time, dispatch — one clear answer at a time.

Know the business

Pricing, services, and policies from an always-current knowledge base.

Hand off to a human

Transfers to the UTrucking team whenever the caller wants a person.

Stay on track

Brief, natural, and focused — no rambling, no reading out raw data.

A full toolkit, not just a phone line

Instant estimate

Customer photographs their pile or types items → an itemized price on the spot. Prices *any* item by matching it to the closest one we sell.

Web chat & browser voice

The phone agent's exact brain, testable by text or voice for free — same identity-verified order lookup, no call minutes.

Business insights

A live dashboard of revenue, demand, upsell pairs, the completion funnel and a data-quality scorecard.

Ask your data

A plain-English analyst that answers "*how much should I raise prices?*" with concrete numbers — aggregate only, no private data.

Ops command center

Staff pick a day → balanced crew routes by building with printable run sheets.

Next-season forecast

Projects the peak week, the crews it needs, and the revenue in that window — the live peak day runs 334 pickups.

Upsell & condition check

Every quote suggests the add-ons students actually store together, and a photo reads good/wear/damage for move-out dispute protection.

Staff console

One morning-standup screen: today's sequenced run sheet, billing to recover, demand forecast, and data health.

Built to protect student data

- Confirms identity before sharing anything — the caller's name *plus* a second detail.
- Never reveals one student's information to another, even on a close name match.
- Safety guardrails keep it on-task and on-brand.
- Stress-tested against wrong-name and impostor scenarios.

QUALITY

Tested, not just built

10/10

conversation scenarios passed

0

wrong-student matches on
garbled names

1

real phone call, start to finish

identity check blocks impostors

Behavior was validated by replaying full conversations against the live assistant, plus a name-matching audit across the entire student roster. **A full QA log is available.**

From answering questions to doing the work

Today

- Order lookup by name
- Privacy verification
- Pricing & service Q&A
- Transfer to the team

Next

- Schedule / reschedule / cancel a pickup
- Recognize callers by phone number
- Message & callback capture

Later

- New sign-ups on the call
- Text confirmations & links
- Spanish for parents
- Reminder calls

THE IMPACT

What this means for UTrucking

- Offloads the repetitive calls that tie up the front desk.
- Scales instantly at peak season — no hold times, no missed calls.
- Consistent, accurate answers, every single time.
- Frees the team for the work that actually needs a human.

NEXT STEP

Ready to pilot

The assistant is live and tested in our system. The next step is a short pilot on a real phone line — measuring calls handled, questions answered, and staff time saved.
