

Phone Line & SMS — Setup Plan

What it takes to turn on the real phone line and text messaging, in order — what you do, and what I wire up. The web/chat tools already work today with none of this.

Where each channel stands

Channel	Status	What it needs
Web chat + estimate page	✅ Live now	Nothing — no number, no registration
Voice phone line	⌚ Needs a number	A phone number + a Business Profile
Text messaging (SMS)	⌚ Needs registration	US carrier registration (EIN or Sole-Proprietor path)
Booking write-back	⌚ Needs sheet edit access	Google Apps Script on the sheet (currently view-only — owner must enable)

The rollout — 4 steps

Step 1 • Get the number + Business Profile (*you*) Create the account, fill the **Business Profile form** (fields below), and buy a number (~\$1–3/mo). A number for **voice** can be used right away.

Step 2 • Register for SMS (*you*) US texting requires carrier registration. Two paths: - **Sole Proprietor** — no EIN; uses personal info. Lower volume, fine for reminders. - **Standard** — needs a free **EIN** (see below). Higher volume.

Step 3 • Enable booking write-back (*owner — optional, do when ready*)

Booking/rescheduling writes to the sheet, which needs **edit access** via a free Google Apps Script (see `SETUP_BOOKING_WRITEBACK.md`). *Current blocker: this account has view-only access — the sheet owner needs to add the script.*

Step 4 • I wire it all up (*me*) Send me the **number** (and, when ready, the Apps Script URL + secret). I connect the voice tools + SMS + booking, run tests against a scratch record, and

switch it live. Then **we query/test again** and confirm before real customers hit it.

Flow: fill the form → get the number → (EIN if needed) → send it to me → I wire + test → we verify together → live.

The Business Profile form — what to fill

Fill each field from the business's **official** records (it gets vetted — mismatches get rejected).

Field	What to put
Business Name	Legal registered name, exactly as on tax docs
Business Type	LLC / Corporation / Sole Proprietor / Partnership / Non-profit
Business Industry	Transportation / Logistics (closest to storage & moving)
Business Registration ID Type	EIN (United States)
Business Registration Number	The 9-digit EIN
Region of Operation	USA
Website URL	The real site (helps approval)
Physical Address	Real registered address (St. Louis, MO) — street, city, state, ZIP
Authorized Representative	Owner/manager — First, Last, Email (business-domain email is best)
Phone Number	A real number that can receive a verification text/call (digits only)
Business Title	Director / Owner / CEO / Manager

About the EIN (only needed for the Standard SMS path)

- **Free** and instant from the IRS — never pay a third-party site. Apply at *irs.gov* → "Apply for an EIN online" (open Mon–Fri, 7am–10pm ET).
- You do **not** need an LLC to get one; a Sole Proprietor can.
- **Important:** this bot is being built **for the business owner**, not the developer. The **owner** (or whoever files the taxes) should provide the EIN / do the registration — the

business almost certainly **already has an EIN** if it files taxes. Don't register the company under the developer's personal SSN.

- Don't want an EIN at all? Use the **Sole-Proprietor** SMS path (personal info, lower limits) — or skip SMS and run **voice + web chat** only.

Cost recap

Item	Cost
Web chat + estimate page	\$0 (live)
Phone number	~\$1–3 / mo + ~\$0.07–0.10 / min
SMS	~\$1–2 / mo + ~\$0.008 / text
EIN	free
Booking write-back (Apps Script)	free
