

UTrucking Voice Agent — Conversation Flow Map (Retell, v33)

Legend, Tools & Data

Start	Agent speaks	Caller speaks
Decision	Tool / function call	Privacy / identity gate
Call ends	Arrows = transitions (labels = trigger)	
3 tools: lookup_student (find order by name) · transfer_to_office (cold transfer to 314-266-8878) · end_call		
Data: lookup_student reads TWO live Google Sheets (Dispatch + Service) and fuzzy-matches the spoken name; returns status = found / confirm / not_found / error		
Field mapping: status→order_status · location→building+room · date/time→date+time_slot · items→items_list/boxes/product · dispatch→dispatch_status		
Guardrails: never reveal details before identity is confirmed · answer ONE field per turn · never call the tool without a real spoken name
